

Method for synchronizing eye patterns on multiple screens

Note: This app can only control one screen at a time. If you need to control multiple screens simultaneously, you can only control them through a remote control.

Method 1: Select the corresponding image for each device and turn it on together, paying attention to controlling the synchronization time.

Method 2: Use the remote control for synchronization. The remote control can control two screens simultaneously. There are 17 buttons on the remote control, and the images have been pre-set. However, through the APP settings, the patterns of these 17 buttons can be customized. The specific operation is as follows:

1. Scan the QR code to download APP with your phone

2. After install the APP, when start it, please turn on Bluetooth and GPS in your phone.

Set up two devices separately in the same way, and then use the same remote control to achieve eye pattern synchronization. Please note that all 17 buttons can be customized with patterns in this way for more creative gameplay. We look forward to your discovery.
